The \texttt{todonotes} package*

Henrik Skov Midtiby
henrikmidtiby@gmail.com
November 2, 2016

Abstract
The \texttt{todonotes} package allows you to insert to–do items in your document. At any point in the document a list of all the inserted to–do items can be listed with the \texttt{\listoftodos} command.

1 Introduction

The todonotes package makes three commands available to the user: \todo{}, \missingfigure{} and \listoftodos. \todo{} and \missingfigure{} makes it possible to insert notes in your document about things that has to be done later (todonotes ...). I developed the basic functionality of the package while I worked on my bachelor project.

Some alternatives for the todonotes package are:

- **easy-todo**
  - Depends on color, tocloft and ifthen, small feature set.

- **fixmetodonotes**
  - Depends on graphicx, color, transparent, watermark,fix-cm, ulem and tocloft, small feature set.

- **todo**
  - Depends on amssymb, medium feature set.

- **fixme**
  - Large package with a lot of features.

The main reason for considering other packages is that the todonotes package is quire large and relies heavily on tikz. This can slow down compilation of large documents significantly. The mentioned alternatives have a different feature set and does not rely on tikz, which makes them require less resources.

1.1 Usage

\todo My most common usage of the todonotes package, is to insert an todonotes somewhere in a latex document. An example of this usage is the command
\begin{verbatim}
\todo{Make a cake \ldots}
\end{verbatim}
which renders like. The \todo command has this structure: \todo[(options)]{(todo text)}. The todo text is the text that will be shown in the todonote and in the list of todos. The optional argument options, allows the user to customize the appearance of the inserted todonotes. For a description of all the options see section 1.3.

\missingfigure The \missingfigure command inserts an image containing an attention sign and the given text. The command takes only one argument \missingfigure{text}, a text string that could describe what the figure should consist of. An example of its usage could be
\begin{verbatim}
\missingfigure{Make a sketch of the structure of a trebuchet.}
\end{verbatim}
which renders like.
Make a sketch of the structure of a trebuchet.

The `\listoftodos` command inserts a list of all the todos in the current document. `\listoftodos` takes no arguments. For this document the list of to–do’s looks like.

### Todo list

- Make a cake .................................................. 2
- Figure: Make a sketch of the structure of a trebuchet. .................................................. 2
- And a green note ............................................. 5
- Anything but default colors .................................. 5
- A note with no line connecting it to the placement in the original text. ............... 5
- A todonote placed in the text ................................ 6
- Fill those circles .............................................. 6
- A note with a large font size. ................................ 6
- Note with very small font size. ................................ 6
- Short note ................................................... 6
- Short note with prepend ..................................... 6
- Short note with noprepend .................................. 6
- Testing .......................................................... 6
- Testing author option ........................................ 7
- Testing author option ........................................ 7
- Figure: Testing a long text string .................................................. 7
- Figure: Testing a long text string .................................................. 7
- Figure: Add a test image ........................................ 7
- Figure: Testing .................................................. 8
- Figure: Testing figcolor ........................................ 8
- Does this eat the space? ...................................... 9
- Does this eat the space? ...................................... 9
- Test of newly defined command. ................................ 13
- Test of newly defined command, requesting a green color. .................. 13
- 1: A numbered todonote. ..................................... 13
- 2: Another numbered todonote. ................................ 13
- Comment [HSM1]: Testing first time. .................................................. 13
- Comment [HSM2]: Testing second time. .................................................. 13
The \texttt{\textbackslash todotoc} command adds an entry to the table of contents for list of todos. The command should be placed right before the \texttt{\textbackslash listoftodos} command.

### 1.2 Package options

- **disable**
  - If the option \texttt{disable} is passed to the package, the macros usually defined by the package (\texttt{\todo}, \texttt{\listoftodos} and \texttt{\missingfigure}) are defined as macros with no effect, and thus all inserted notes are removed.

- **obeyDraft, obeyFinal**
  - When the option \texttt{obeyDraft} is given, the package checks if one of the options \texttt{draft}, \texttt{draftcls} or \texttt{draftclsnofoot} is given (this option is usually given to the documentclass). If the \texttt{draft} option is given, the functionality of the package is enabled and otherwise the effect of the package is disabled. The option \texttt{obeyFinal} does something similar, except that the todonotes package is only disabled if the \texttt{final} option given.

- **Danish, german, ngerman, english, french, swedish, spanish, catalan, italian, portuguese, dutch, croatian**
  - Adds a small colored square in front of all items in the Todo list. The color of the square is the same as the fill color of the inserted todonote. This can be useful if there are different types of todos (insert reference, explain in detail, \ldots) where the color of the inserted todonote marks the type of todo.

- **color**
  - These options set the default colors for the todo command. There is three colors that can be specified. The border color (default \texttt{bordercolor=black}) around the inserted text, the color behind the inserted text (default \texttt{backgroundcolor=orange}) and the color of the line connecting the inserted textbox with the current location in the text (default \texttt{linecolor=orange}). Setting the \texttt{color} option to \texttt{val} passes this value on to the background and line color options. The specified colors must be valid according to the \texttt{xcolor} package.

- **textwidth**
  - \texttt{textwidth=length} sets the width of a todo item in the margin to \texttt{length}. The width of inline todonotes will always be the same as the current line width.

- **textsize**
  - \texttt{textsize=value} sets the default text size of the inserted todonotes to the given value. Value is the "name" of the used font size, eg. if the desired fontsize is \texttt{\tiny} use \texttt{textsize=tiny}. The default value is \texttt{textsize=normalsize}. 
The \texttt{prependcaption} option triggers a special behaviour of the \texttt{caption=val} option for the \texttt{todo} command, where the given value \texttt{val} is inserted in the inserted todonote.

\textbf{shadow}  
If the \texttt{shadow} option is given, the inserted todonotes will be displayed with a gray shadow. I expect that the option will trigger problems with tikz versions prior to 2.0.

\textbf{dvistyle}  
When a document with todonotes is compiled with plain latex (to a dvi-file), there is an issue with the visual appearance\footnote{The problem is placement of text inside the colored boxes.}. The option \texttt{dvistyle} changes the appearance of the inserted todonotes to avoid this problem.

\textbf{figwidth}  
The \texttt{figwidth=length} option sets the default width of the figure inserted by the \texttt{\missingfigure} command. The default value is \texttt{\linewidth}.

### 1.3 Options for the \texttt{todo} command

There are several options that can be given to the \texttt{\todo} command. All the options are described here and often I have included examples of the change in visual appearance. Default values for these options can be set using the \texttt{\presetkeys} command.

\begin{verbatim}
\presetkeys{todonotes}{fancyline, color=blue!30}{}
\end{verbatim}

The \texttt{disable} option can be given directly to the \texttt{todo} command. If given the command has no effect.

\begin{verbatim}
\todo[disable]{A note with no effect.}
\end{verbatim}

These options set the color that is used in the current todo command. The color classes is the same as used in the color package options, see section 1.2.

\begin{verbatim}
\presetkeys{todonotes}{color=green!40, backgroundcolor=blue!20!white, bordercolor=red, linecolor=green!70!white}{}
\end{verbatim}

The problem is placement of text inside the colored boxes.

\begin{verbatim}
\presetkeys{todonotes}{fancyline}{}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{color=green!40}{And a green note}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{color=red!40}{And an red note}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{linecolor=green!70!white, backgroundcolor=blue!20!white, bordercolor=red}{Anything but default colors}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{noline}{}
\end{verbatim}

A note with no line connecting it to the placement in the original text.

\begin{verbatim}
\presetkeys{todonotes}{ inline}{}
\end{verbatim}

It is possible to place a todonote inside the text instead of placing it in the

\begin{verbatim}
\presetkeys{todonotes}{ notinline}{}
\end{verbatim}

 Anything but default colors

\begin{verbatim}
\presetkeys{todonotes}{notinline}{}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{inline}{}
\end{verbatim}

An example that uses all of the color options is given below.

\begin{verbatim}
\presetkeys{todonotes}{color=green!40, backgroundcolor=blue!20!white, bordercolor=red}{Anything but default colors}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{noline}{}
\end{verbatim}

A note with no line connecting it to the placement in the original text.

\begin{verbatim}
\presetkeys{todonotes}{notinline}{}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{inline}{}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{ notinline}{}
\end{verbatim}

\begin{verbatim}
\presetkeys{todonotes}{ inline}{}
\end{verbatim}
margin, this could be desirable if the text in the note has a considerable length.
\todoinline{A todonote placed in the text}

A todonote placed in the text

Another usage for the inline option is when you want to add a
todonote to a figure caption.

\begin{wrapfigure}{r}[20mm]{40mm}
\begin{tikzpicture}
\draw[red] (0, 0) circle(0.45);
\draw[green] (1, 0) circle(0.45);
\draw[blue] (2, 0) circle(0.45);
\end{tikzpicture}
\caption{A text explaining the image.}
\todoinline{Fill those circles \ldots}
\end{wrapfigure}

Figure 1: A text explaining the image.

A note with a large font size.\todo[size=\Large]{A note with a large font size.}

A note with very small font size.\todo[size=\tiny]{Note with very small font size.}

When the option \texttt{nolist} is given, the todo item will not appear in the list of
todos.

The \texttt{caption} option enables the user to specify a short description of the
todonote that are inserted in the list of todos instead of the full todonote text.

\todo[\texttt{caption=Short note}]{A very long and tedious note that cannot be on one line in the list of todos.}

The effect of this option is altered with the package option \texttt{prependcaption} or the\texttt{prepend / noprepend} option for the todo command.

The options \texttt{prepend} and \texttt{noprepend} can be used for setting whether a given caption should be prepended to the todonote or not. Globally this can be set using the \texttt{prependcaption} option for the package. Below is the effect of the option shown using the code:

\todo[\texttt{prepend, caption=Short note with prepend}]{A very long and tedious note that cannot be on one line in the list of todos.}
\todo[\texttt{noprepend, caption=Short note with noprepend}]{A very long and tedious note that cannot be on one line in the list of todos.}

The \texttt{fancyline} option inserts a curved arrow, pointing from the inserted note to the insertion point. The option is used like this:

\todo[fancyline]{Testing.}
The **author** option takes a parameter, the name of the author. The given name is inserted in the todonote.

\begin{verbatim}
\todo[author=Xavier]{Testing author option.}
\todo[author=Xavier, inline]{Testing author option.}
\end{verbatim}

### 1.4 Options for the **missingfigure** command

**figwidth** The **figwidth**=**length** option sets the width of the figure inserted by the **\missingfigure** command. Length values below 6cm might trigger some problems with the visual appearance. Try to compare the default of the missing figure command, when the option is given or not.

\begin{verbatim}
\missingfigure[figwidth=6cm]{Testing a long text string}
\end{verbatim}

Another usage of the option is when **\missingfigure** is used in the wrapfigure environment.

\begin{verbatim}
\begin{wrapfigure}{r}{2cm}
\missingfigure[figwidth=6cm]{Add a test image \ldots}
\end{wrapfigure}
\end{verbatim}
The \texttt{figheight=length} option changes the height of the inserted missing figure. The default height is 4cm and using values lower than this might cause the warning sign to pop out of the gray area.

\begin{missingfigure}[figheight=6cm]{Testing a long text string}
\end{missingfigure}

\begin{figure}
\centering
\begin{tikzpicture}
\path[fill=red,draw=red] coordinates{(0,0) (1,1) (2,0)};
\end{tikzpicture}
\caption{Testing figure}
\end{figure}

The \texttt{figcolor=color} options sets the background color of inserted missing figures. The default color is black!40.

\begin{missingfigure}[figcolor=white]{Testing \texttt{figcolor}}
\end{missingfigure}

\begin{figure}
\centering
\begin{tikzpicture}
\path[fill=red,draw=red] coordinates{(0,0) (1,1) (2,0)};
\end{tikzpicture}
\caption{Testing \texttt{figcolor}}
\end{figure}

\section{1.5 Options for the listoftodos command}

The \texttt{\textbackslash listoftodos} command takes one optional argument, that defines the name of the inserted list of todos.

\begin{listoftodos}[I can be called anything]
1.6 Known issues

1.6.1 Package loading order

The todonotes package requires the following packages.

- ifthen
- xkeyval
- xcolor
- tikz
- calc
- graphicx (is loaded via the tikz package)

When todonotes are loaded in the preamble, the package checks if these packages all are loaded. If that is not the case it loads the missing packages with no options given. If you want to give some specific options to some of these packages, you have to load them before the todonotes package, otherwise you will get an "Option clash" error when latex works on the document.

If both the menukeys and the xcolor (with the option table) package should be loaded, the following order must be used.

\usepackage{table}\{xcolor\}
\usepackage{todonotes}
\usepackage{menukeys}

1.6.2 Spacing around inserted notes

Inserted todo commands will eat the white space after the command.

Testing\todo{Does this eat the space?} testing.

Testing testing.

This can be prevented by adding curly parenthesis after the todo command, like shown below.

Testing\todo{Does this eat the space?}\{} testing.

Testing testing.

1.6.3 Wrapping of long lines in list of todos

When a document is compiled with latex (and not pdflatex) long items in the list of todos are not wrapped into several lines, and do instead continue to the right out of the page.
1.6.4 Conflicts with the amsart documentclass

The amsart document class redefines some internal commands that is used by the todonotes package, this will cause an malfunctioning \listoftodos command. The following code to circumvent the problem was given by Dan Luecking on comp.text.tex

\makeatletter
  \providecommand\@dotsep{5}
\makeatother
\listoftodos\relax

NOT TESTED NOT TESTED NOT TESTED

Dominique suggests the following workaround.

\makeatletter
  \providecommand\@dotsep{5}
  \def\listtodoname{List of Todos}
  \def\listoftodos\@starttoc{tdo}\listtodoname
\makeatother

1.6.5 Unknown option ”remember picture”

If latex throws the error

Package tikz Error: I do not know what to do with the option ‘‘remember picture’’.

It probably means that your latex installation is outdated, as only newer versions of latex driver for tikz supports the remember picture option. For additional info consult ”Section 9.2.2 Producing PDF Output” in the tikz manual.  http://www.ctan.org/tex-archive/graphics/pgf/base/doc/generic/pgf/pgfmanual.pdf

1.6.6 Todonotes wrongly placed in the margin

When using some document classes or packages, the todonotes inserted in the page margin can be placed quite oddly. This is often caused by a wrong value of the \marginparwidth lenght. Try using the code below in your preamble to see if this cures the problem.

\setlength{\marginparwidth}{2cm}

If the todonotes are inserted in the wrong margin, the solution is the \reversemarginpar command. When this command is issued the following marginpars (which todonotes relies on) is inserted in the other margin.
1.6.7 Reduce number of warnings

If the width of the inserted todonotes is forced to be larger than the available space in the margin, a lot of warnings are issued. This can be reduced with the following code.

\usepackage[textwidth=3.7cm]{todonotes}
\setlength{\marginparwidth}{3.7cm}

1.6.8 Todonotes in footnotes

Placing todonotes in footnotes throws a lot of errors. Richard Stanton comes with the following work around.

\renewcommand{\marginpar}{\marginnote}

1.6.9 List of todo heading is not correctly formatted

If using natbib, the todonotes list title gets screwed up unless you do something like this:

\makeatletter\let\chapter@undefined\makeatother

Suggestion by Richard Stanton.

1.6.10 Trouble with classicthesis.sty

Problem description on tex.stackexchange.com.

Solution by Stefan Kottwitz. The problem is caused by the redefinition of \marginpar in classicthesis.sty. \marginpar is used by todonotes. It can be fixed by restoring the original meaning, if you don’t need the classicthesis marginpar style. Just add this to your document preamble: \let\marginpar\oldmarginpar

1.7 Things to improve

This is a list of things I consider to improve sometime in the future. It have not been done yet as I lack the time or skills to implement them. Patches with implementations of these tasks will be appreciated and might be included in the package if it will improve the package quality.

1.7.1 Owner information

Option for the todo command.

\todo[owner={Fabrice}]{Stuff}

Add info on who "owns" the current todo. Idea: Fabrice Niessen
1.7.2 Due date

Option for the todo command.

\todo[due=2008-12-07]{Stuff}

Add info on when the current todo is due. Might be enhanced by a time line of the todos that have a due date assigned. Idea: Fabrice Niessen

1.7.3 Mark accomplished todos

\todo[done]{Stuff}

Idea: Fabrice Niessen

1.8 Usage methods

In this section I have collected some different methods to use the todonotes package.

1.8.1 Define new commands with fixed options

Often there is a need for marking different classes of things to do (add reference, rewrite, ...). One way to do this, is to define some new commands as shown below (idea from Florent B.).

\newcommand{\addref}{\todo[color=red!40]{Add reference.}}
\newcommand{\rewrite}{\todo[color=green!40]{#1}}

To distinguish between the different types of todos, the todonotes package can be loaded with the colorinlistoftodos option, which adds small colored squares to the list of todos.

\usepackage[colorinlistoftodos]{todonotes}

1.8.2 Define new commands with arbitrary default options

If you do not like the default values of the standard todo command, it is possible to define a new command with the similar functionality of \todo with custom default values.

\newcommand{\todoredefined}{\todo[color=red, #1]{#2}}
The new command can now be used like shown below:
\todo[defined]{Test of newly defined command.}
\todo[defined]{color=green}{Test of newly defined command, requesting a green color.}

This can be done with all the accepted options for the \todo command.

1.8.3 Enumerate todonotes

If the inserted todonotes should be enumerated, it is possible to define a new command with the desired behaviour:
\newcounter{todocounter}
\newcommand{\todonum}{\stepcounter{todocounter}\todo{\thetodocounter: #2}}

The idea is to define a new counter todocounter, and insert the value of the counter in each todonote. The new command can be used like:
\todonum{A numbered todonote.}
\todonum{Another numbered todonote.}

1.8.4 Comments ”a la Word”

Fabrice Niessen sent me the following use case. The idea is to define a new command \mycomment which adds a counter and optionally the initials of the author to the inserted todonote.
\newcounter{mycomment}
\newcommand{\mycomment}{% initials of the author (optional) + note in the margin
% refstepcounter{mycomment}%
% \setstretch{0.7}\% spacing
\todo[color={red!100!green!33},size=\small]{%\textbf{Comment [\uppercase{#1}\themycomment]:}~#2}\%
}\

The command \mycomment[HSM]{Testing first time.} is displayed like shown in the left margin, and another call of the command is added below.
\mycomment[HSM]{Testing second time.}

1.8.5 Combination with the fixme package

Thomas Arildsen has mailed me this use case. Check the documentation for the fixme package, as the code below relies directly on it (the \FDUser command is augmented when \begin{document} is reached).
1.8.6 Altering the line spacing of todonotes

The \texttt{setspace} package lets you alter the line spacing of smaller sections of your document. The primary construct is the \texttt{spacing} environment, which is demonstrated below.

\begin{spacing}{0.5}
Some lines with a decreased line spacing. This is accomplished using the \texttt{setspace} package that is included in standard latex distributions.
\end{spacing}

Some lines with a decreased line spacing. This is accomplished using the \texttt{setspace} package that is included in standard latex distributions.

Using the \texttt{spacing} environment we can define a new todonote command using the code below:

\newcommand\texttt{\smalltodo}[2][]\{
doto[caption=\texttt{#2}, #1]\begin{spacing}{0.5}\texttt{#2}\end{spacing}\}

Todonotes with decreased line spacing can now be inserted as follows

\smalltodo[size=\footnotesize]{Some lines with a decreased line spacing. This is accomplished without using any special packages.}

A different approach is given by Vitaly.

\newcommand\texttt{\tinytodo}[2][]\{
doto[caption=\texttt{#2}, size=\small, #1]\renewcommand\texttt{\baselinestretch}{0.5}\selectfont\texttt{#2}\par\}

It looks like seen here.

\tinytodo{Some lines with a decreased line spacing. This is accomplished without using any special packages.}
1.8.7 Marking new / old sections

Sometimes a whole section has to be marked by some means. You might want to try the following.

\begin{verbatim}
\newcommand\todoin[2][{}]{\todo[inline, caption=2do, #1]{\begin{minipage}{\textwidth-4pt}#2\end{minipage}}}
\end{verbatim}

This example renders like

\begin{verbatim}
\todoin{
Some text. \\
\begin{align}
\sin(\theta)^2 + \cos(\theta)^2 = 1
\end{align}
A formula and a list \\
\begin{itemize}
\item An item
\end{itemize}
}
\end{verbatim}

1.8.8 Link to list of todos

Using the \texttt{hyperref} package it is possible to add a link from the inserted todonotes to the list of todos. The example were supplied by Andreas Plank.

% Define a counter for the inserted todonotes.
The idea behind the code is to embed a \texttt{hypertarget} in each entry in the list of todos. In the todonotes a link to the entry in the list of todos is inserted as an arrow that points upwards. Using the \texttt{todoTrans} command like below, the following two notes have been inserted.

\begin{verbatim}
\todoTrans\{papirsflyver\}
\todoTrans[inline]\{damplokomotiv\}
\end{verbatim}
1.8.9 Numbered todonotes

The inserted todonotes can be argumented with the current subsubsection number. The code is shown below.

\newcommand{\ntodo}[2][]{\todo[#1]{\thesubsubsection{}. #2}}

By changing \thesubsubsection to \thesection, the current section number can be inserted instead of the subsubsection number. The result looks like. Which were generated by the code
\ntodo{A subsection numbered todo.}.

1.8.10 Combining several modifications

Manduca have combined several of the modifications above into a highly specialized todo command. She uses the code:

\newcounter{todoListItems}
\newcommand{\sstodo}[2][]\{\addtocounter{todoListItems}{1}
\todo[caption={\protect\hyperlink{todo\thetodoListItems}{\thesection. #2}}, #1]
\{\begin{spacing}{1} \hfill \hyperlink{todo\thetodoListItems}{#2} \end{spacing} \}

Using this approach it is possible to customize the behavior of the inserted notes to a very high degree.

1.8.11 Alter the appearance of the list of todos

Marco Daniel gives the following example of how to add section numbers to the elements in the list of todos. The code is slightly modified from http://tex.stackexchange.com/questions/18838/replacing-page-number-with-other-counter-in-listoftodos.

An example of the modified list of todos is shown below, the complete code example is given in the example directory.

| This is a note ............................................. | see 1.1 at p. 2 |
| This is another note ...................................... | see 1.2 at p. 4 |

1.8.12 Tikz externalization issues

Using the tikz externalization framework together with todonotes can lead to some problems. One solution is to disable the externalization just before the todo command is issued and then reactivate externalization afterwards. The ruggedtodo handles this deactivation and reactivation.

\usetikzlibrary{external}
\tikzexternalize
\newcommand{\ruggedtodo}[2][]\{\tikzexternaldisable\todo[#1]{#2}\tikzexternalenable}
1.8.13 Highlight text to fix

Tobias Winchen provides the following example on how to highlight text related to the inserted todonote. Example wrong text continues here. Notice that the code relies on the soul package.

\makeatletter
\if@todonotes@disabled
\newcommand{\hlfix}{2}{#1}
\else
\newcommand{\hlfix}{2}{\texthl{#1}\todo{#2}}
\fi
\makeatother
Example \hlfix{wrong text}{fix text}~continues here.
2 Implementation

Identifies the package and loads the packages dependences.

\ProvidesPackage{todonotes}[2012/07/25]
\RequirePackage{ifthen}
\RequirePackage{xkeyval}
\RequirePackage{xcolor}
\RequirePackage{tikz}
\usetikzlibrary{positioning}
\RequirePackage{calc}

Some default values are set
\newcommand{\@todonotes@text}{}
\newcommand{\@todonotes@backgroundcolor}{orange}
\newcommand{\@todonotes@linecolor}{orange}
\newcommand{\@todonotes@bordercolor}{black}
\newcommand{\@todonotes@textwidth}{\marginparwidth}
\newcommand{\@todonotes@textsize}{\normalsize}
\newcommand{\@todonotes@figwidth}{\linewidth}
\newcommand{\@todonotes@figheight}{4cm}
\newcommand{\@todonotes@figcolor}{black!40}
\AtBeginDocument{
  \ifx\undefined\phantomsection
    \newcommand{\phantomsection}{}
  \fi
}

2.1 Declaration of options for the package

In this part the various options for the package are defined. Define the default text strings and set localization options for the danish and german languages.

\newcommand{\@todonotes@todolistname}{Todo list}
\newcommand{\@todonotes@MissingFigureText}{Figure}
\newcommand{\@todonotes@MissingFigureUp}{Missing}
\newcommand{\@todonotes@MissingFigureDown}{figure}
\newcommand{\@todonotes@SetTodoListName}[1]{\renewcommand{\@todonotes@todolistname}{#1}}
\newcommand{\@todonotes@SetMissingFigureText}[1]{\renewcommand{\@todonotes@MissingFigureText}{#1}}
\newcommand{\@todonotes@SetMissingFigureUp}[1]{\renewcommand{\@todonotes@MissingFigureUp}{#1}}
\newcommand{\@todonotes@SetMissingFigureDown}[1]{\renewcommand{\@todonotes@MissingFigureDown}{#1}}
\newcommand{\@todonotes@SetTodoListName}{\SetTodoListName}[1]
\newcommand{\@todonotes@SetMissingFigureText}{\SetMissingFigureText}[1]
\newcommand{\@todonotes@SetMissingFigureUp}{\SetMissingFigureUp}[1]
\newcommand{\@todonotes@SetMissingFigureDown}{\SetMissingFigureDown}[1]
\newcommand{\@todonotes@ReverseMissingFigureTriangle}[1]{\reverseMissingFigureTriangle}[1]
\DeclareOptionX{catalan}{
  \@todonotes@SetTodoListName{Llista de feines pendents}\
  \@todonotes@SetMissingFigureText{Figura}\
  \@todonotes@SetMissingFigureUp{Figura}\

Create a counter, for storing the number of inserted todos.
\newcounter{@todonotes@numberoftodonotes}

Toggle whether the package should obey the global draft option.
\newif{\if@todonotes@obeyDraft}
\DeclareOptionX{obeyDraft}{\@todonotes@obeyDrafttrue}
\newif{\if@todonotes@isDraft}
\DeclareOptionX{draft}{\@todonotes@isDrafttrue}
\DeclareOptionX{draftcls}{\@todonotes@isDrafttrue}
\DeclareOptionX{draftclsnofoot}{\@todonotes@isDrafttrue}
\newif{\if@todonotes@obeyFinal}
\DeclareOptionX{obeyFinal}{\@todonotes@obeyFinaltrue}
\newif{\if@todonotes@isFinal}
\DeclareOptionX{final}{\@todonotes@isFinaltrue}

Make it possible to disable the functionality of the package. If this option is
given, the commands \todo{} and \listoftodos are defined as commands with
no effect. (But you can still compile you document with these commands).
\newif{\if@todonotes@disabled}
\DeclareOptionX{disable}{\@todonotes@disabledtrue}

Show small boxes in the list of todos with the color of the inserted todonotes.
\newif{\if@todonotes@colorinlistoftodos}
\DeclareOptionX{colorinlistoftodos}{\@todonotes@colorinlistoftodostrue}

The default style behaves bad when compiled with latex (some text placement
problems). The dvistyle option, changes the visual behavior to avoid this text
placement problem.
\newif{\if@todonotes@dviStyle}
\DeclareOptionX{dvistyle}{\@todonotes@dviStyletrue}
Create a color option.
\begin{verbatim}
\define@key{todonotes.sty}{color}{
    \renewcommand{\@todonotes@backgroundcolor}{#1}
    \renewcommand{\@todonotes@linecolor}{#1}}
\end{verbatim}

Make the background color of the notes as an option.
\begin{verbatim}
\define@key{todonotes.sty}{backgroundcolor}{\renewcommand{\@todonotes@backgroundcolor}{#1}}
\end{verbatim}

Make the line color of the notes as an option.
\begin{verbatim}
\define@key{todonotes.sty}{linecolor}{\renewcommand{\@todonotes@linecolor}{#1}}
\end{verbatim}

Make the color of the notes box color as an option.
\begin{verbatim}
\define@key{todonotes.sty}{bordercolor}{\renewcommand{\@todonotes@bordercolor}{#1}}
\end{verbatim}

Set whether short captions given as arguments to the todo command should be included in the inserted todonote.
\begin{verbatim}
\newif{\if@todonotes@prependcaptionglobal}
\@todonotes@prependcaptionglobalfalse
\DeclareOptionX{prependcaption}{\@todonotes@prependcaptionglobaltrue}
\end{verbatim}

Make the text width as an option.
\begin{verbatim}
\define@key{todonotes.sty}{textwidth}{\renewcommand{\@todonotes@textwidth}{#1}}
\end{verbatim}

Make the text size as an option. It requires some magic with the `\csname` and `\endcsname` macros, as commands cannot be taken as options for a package.
\begin{verbatim}
\define@key{todonotes.sty}{textsize}{\renewcommand{\@todonotes@textsize}{\csname #1\endcsname}}
\end{verbatim}

Add option for shadows behind the inserted notes.
\begin{verbatim}
\newif{\if@todonotes@shadowenabled}
\@todonotes@shadowenabledfalse
\DeclareOptionX{shadow}{\@todonotes@shadowenabledtrue \usetikzlibrary{shadows}}
\end{verbatim}

Add option for the default width of the figure inserted with `\missingfigure`.
\begin{verbatim}
\define@key{todonotes.sty}{figwidth}{\renewcommand{\@todonotes@figwidth}{#1}}
\define@key{todonotes.sty}{figheight}{\renewcommand{\@todonotes@figheight}{#1}}
\define@key{todonotes.sty}{figcolor}{\renewcommand{\@todonotes@figcolor}{#1}}
\end{verbatim}

Make the text width as an option.
\begin{verbatim}
% Finally process the given options.
\begin{macrocode}
\ProcessOptionsX*
\end{macrocode}
\end{verbatim}
If the `obeyDraft` is given, check whether one of the `draft`, `draftcls` or `draftclsnofoot` options are given and enable or disable the functionality of this package. If the `obeyFinal` option is given together with the `final` option the todonotes are disabled. The `disable` option will overrule the effect of `obeyDraft`.

made then break the package.

This have been fixed. 0.8.4

General: Fixed a bug related to
the caption option for the todo command. Introduced a
counter of the number of inserted todos. 0.7.4

General: Fixed a typo in a
macroname. 0.7.5

General: Added a textsize option
for the package and the
prepend / noprepend option
for the todo command. 0.7.6

General: Added three new
translations french, spanish
and catalan thanks to Richard
Dominique and Joan Queralt.
Improved the visual
appearance of the inserted
notes (rounded corners and
optional shadows) with code
from Joan Queralt. Found an
untranslated textstring
"Figure" in the source. Added
a figwidth option to the
missingfigure command, patch
by Paul Ivanov. 0.8

General: Added a space between
the colored square and the text
in the list of todos. Added a
new usecase for marking old /
new sections. Made the name
of listoftodos changeable. 0.8.1

General: Italian translation by
Gustavo Cevolani. Removed
the dependence on the hyperref
package. 0.8.2

General: Added a use case for
linking to the list of todos, idea
from Andreas Plank.
Introduced a package option
for listening to the draft option
given to the document class. 0.8.3

General: Fixed a bug related to
the obeyDraft option. 0.8.4

General: Added two new usecases
(enumeration of inserted
todonotes and how to set
custom default values).
Changed the order of the use
case examples. 0.8.5

General: Added a portuguese
translation by Og DeSouza. 0.8.6

General: Updated portuguese
translation. Added a ngerman
alias for the german translation
suggested by Michael
Niedermair. 0.8.7

General: Added a new usecase
from Vitaly. Fixed a bug
reported by Oscar Gustafsson.
Explained why the placement
of todonotes in the margin fails
in certain custom document
classes. 0.8.8

General: Added a dutch
translation by Ruben Ruben
Vermeersch. 0.8.9

General: Added a english option as
suggested by Marco Berghoff. 0.9.0

General: Added the todototoc
command by idea from Sven
